

HENRIQUE PAIN

DATA ANALYST

henrique.reolon.pain@gmail.com | (54) 98129-3329 | Passo Fundo, RS, Brazil (Remote) | linkedin.com/in/henrique-pain

PROFESSIONAL SUMMARY

Data Analyst with a strong background in Economics and Corporate Finance (CPA-20). Expertise in building ETL/ELT pipelines (Python, GCP), Data Warehouse modeling (BigQuery), and workflow orchestration (GitHub Actions). Unique differentiator: ability to translate business requirements into data architectures, combining financial domain knowledge and analytical skills to deliver dashboards and insights that drive strategic decisions (Power BI/SQL).

PROFESSIONAL EXPERIENCE

- Data Analyst & Financial Coordinator | Agencia Gallo**

05/2024 – Present

 - Built a monthly data consolidation pipeline: extraction from transactional database, SQL transformation, and loading into Power BI, delivering dashboards for P&L, cash flow, EBITDA, ROI, and payback to the executive team.
 - Led monthly results presentations (Expected vs. Actual) and quarterly financial projection reviews, supporting strategic decisions across business squads.
 - Architected the company's initial financial controls (managerial P&L and cash flow), establishing the foundation for financial data governance.
- Financial Coordinator | Amor Saude**

09/2023 – 12/2023

 - Managed cash flow operations and prepared strategic financial reports for executive leadership, with a focus on cost optimization.
- Financial Assistant | Teleperformance (Lisbon, Portugal)**

10/2022 – 08/2023

 - Conducted financial audits and account management in a multinational environment, ensuring data quality and compliance (RBAC).
- Coordinator & Tax Specialist | SilverioIR**

01/2021 – 08/2022

 - Coordinated complex tax routines (Personal Income Tax and Crypto Assets), ensuring data governance in financial operations and regulatory compliance.

EDUCATION

- Postgraduate in Financial Management (in progress) — UPF**

2025 – Present
- MBA in Sustainable Development and Circular Economy — UPF**

2024
- Bachelor's Degree in Economics — UPF**

2017 – 2021

CERTIFICATIONS & LANGUAGES

CPA-20 (ANBIMA) | English: Fluent | Portuguese: Native

TECHNICAL SKILLS

- Languages**

Python (Pandas, Scikit-learn), SQL, Cypher (Neo4j)
- BI & Analytics**

Power BI, Looker, Tableau, Advanced Excel
- Data Engineering**

ETL/ELT Pipelines, Data Warehouse/Lakehouse Modeling, Data Quality, Governance, Observability
- Cloud & Orchestration**

Google Cloud Platform (BigQuery), GitHub, GitHub Actions (CI/CD)
- Data Science**

Machine Learning (Scikit-learn), Econometric Models, Regression, Classification
- Business**

P&L, Cash Flow, Budget Planning, Risk Management, CPA-20

PROJECTS

Econometric Monitoring & Forecasting — Corn Price (RS, Brazil)

- Built an automated ETL pipeline in Python for data ingestion via API and web scraping, correlating corn prices with regional climate variables.
- Modeled the Data Warehouse in Google BigQuery with staging and semantic layers, orchestrating automatic updates via GitHub Actions.
- Quantified financial impacts using econometric regression models (99% statistical confidence), delivering insights through dynamic dashboards focused on data observability.

Hybrid Recommendation System (Next Best Offer) — Credit Union Sector

- Built a financial recommendation engine using a graph database (Neo4j AuraDB) and Python (Pandas), modeling the relationship network among credit union members.
- Developed optimized Cypher queries to identify member clusters by consumption similarity, segment, and income range.
- Implemented a pure collaborative filtering algorithm directly in the database, increasing retention campaign precision and delivering purchase propensity insights in milliseconds.

Sports Predictive Model — Brazilian Championship 2026

- Developed a Machine Learning pipeline in Python (Scikit-learn) to predict Brazilian Championship match outcomes using historical data.
- Trained and compared multiple classification algorithms (Random Forest, Logistic Regression, Naive Bayes), evaluating performance with confusion matrix and accuracy metrics.
- Demonstrated end-to-end ML cycle ownership: data collection, feature engineering, training, validation, and results communication.
